

LUMINYS TO DEMONSTRATE WORLD-LEADING HIGH SPEED LIGHTS AT CINE GEAR 2011

-Luminys 30K LabLight delivers 30,000 watts of high quality, flicker-free light on demand, from a 12 amp, 120 volt outlet

Hollywood, CA – June 2, 2010 – Luminys® Systems Corp., the leading developer and manufacturer of ultra-high-intensity lighting systems, will demonstrate its 30,000 kilowatt LabLight™ at Cine Gear in Los Angeles June 3rd and 4th in booth #107.

The Luminys 30K LabLight is the only high speed – high intensity light that is flicker-free up to one million frames per second, and is the only light in the world that can deliver 30,000 watts of light while operating only on a 12 amp 120 VAC house power feed. The 30K LabLight features an Enhanced Spectrum Plasma™ lamp that reaches full power and full color temperature in just one millisecond, and can be triggered manually or by the event.

“Having the light just when you need it not only gives you the security of knowing you captured the shot,” said David Pringle, CTO, Luminys, “but also offers a major advantage when your are fighting the excess power and heat that conventional high-intensity lights bring.”

Additionally during Cine Gear 2011, Luminys will show the 3X SoftSun® fixtures. The SoftSun is only continuous Enhanced Spectrum Plasma™ light available today, delivering unparalleled light quality and control. The Luminys SoftSun is the largest single-source light in the world, offering continuous light from 3.3K to 100K. SoftSun fixtures produce high-quality 5400K light that can be dimmed to 3% of maximum output without changing color temperature. SoftSuns® are flicker-free and instantly reach full power and full color temperature.

The Luminys LabLights and SoftSuns are available immediately from Luminys and a worldwide network of sales and rental distributors.

About Luminys

Luminys Systems Corp., formerly Lightning Strikes, Inc., is the developer of the award-winning Lightning Strikes® and SoftSun® lighting systems for motion picture and television production, live events, entertainment venues, high-speed testing applications, and other industrial and professional uses. Luminys is a subsidiary of Imagility Inc.

Luminys lighting systems offer up to 500,000 watts of intensity from a single source, with high-quality light (5400° Kelvin and 96+ CRI) that can dim from 100% to 3% of maximum output without a shift in color temperature. Luminys™ is a vertically integrated in-house design, engin-

engineering and manufacturing company providing application-specific lighting solutions and control systems.
